Let's Start!

Let's review!

Learning Outcome

Understand detailed descriptions of real or imaginary events and experiences in present, past or future and in spoken or written texts.

Can Do Statements

- I can talk about technology and personal dilemmas.
- I can talk about likely or unlikely situations.
- I can talk about what I will be doing or what I will have done.

Ask your partner:

- How often are you distracted by your phone when you are out with other people?
- How do you think social interaction changes when people have their cell phones out?
- When should cell phones be off or at least out of sight?

Let's Explore!

Someone will be **thumbing*** through their e-mails.

* "Thumbing" means to use your thumb to scroll through items on a phone.

Instructions: Read the text aloud.

If you remember the time before mobile phones were invented, you know that people had no choice but to interact. This is no longer. If you should happen to be with a group of people, look around. Someone will be thumbing through their e-mails. Another will be having their attention drawn to a news item or Twitter feed. Someone else will be checking in with other friends. No one will be talking to each other.

This is killing conversation. If you were to try to converse, what would happen? Would they just nod and continue? Probably. You'll be considered naive if you don't agree. We will be growing more and more accustomed to sharing physical space without sharing our experience. By the time they are adults most children will have carried phones with them for years.

They will have been living in their heads focused on their screens for a long time. If you were to take their phones away, they would have a hard time adjusting to the novel face-to-face concept.

When phones were first invented people were both excited and appalled. The idea of someone disrupting a family dinner was unsettling. Then phones were walked into our workplace and leisure area. Payphones sprung up on sidewalks. Answering machines recorded the messages of those we missed. Now we have been given a device that is with us waking and sleeping. We are never unplugged.

In the future we will have moved into even more connectivity. We will be living organisms enmeshed with the World Wide Web. We will have become part of the machine, like it or not.

Let's Practice!

Read carefully and select the exact words we're looking for.

Instructions: Read the sentences. Underline all the words and phrases that have a negative connotation about technology. Read the sentences aloud. Check your pronunciation with your instructor.

- 1) When phones were first invented people were both excited and appalled.
- 2) The idea of someone disrupting a family dinner was unsettling.
- 3) Now we have been given a device that is with us waking and sleeping. We are never unplugged.
- 4) Look around! This is killing conversation.
- 5) They will be living in their heads focused on their screens.

Let's Practice!

With technology, anything is possible.

Instructions: Classify the sentences into the correct category. Use the sentences to model a conversation with your partner. Switch roles.

- 1) If you had the choice, would you want to?
- 2) If you should happen to be with a group of people, look around.
- 3) If you were to take their phones away, they would be having a hard time adjusting to the novel face-to-face concept.
- 4) If you were to try to converse, what would happen?
- 5) I certainly won't want to participate in such a realm unless I have to.
- 6) If you remember the time before mobile phones were invented, you know that people had no choice but to interact.

Likely situations

Unlikely situations

Extension Activity

Talk about technology and human interaction in the future.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- In a group, talk about how interfacing with technology will change in the next 20 years if things keep progressing as they have been.
- Talk about what people will be doing, will have done and will have been doing by that time with their technology.
- Write down predictions about how society will have changed because of cell phones and other technology in 20 years' time.
- Read your prediction to a partner.
- Discuss your ideas.

Self-Assessment

Yes

No

I talk about how interfacing with technology will change in the next 20 years.

☐ ☐

I use the Future Perfect, Future Continuous and the Future Perfect Continuous.

☐ ☐

I use the Real Conditional.

☐ ☐

I share and discuss my ideas.

☐ ☐

Target Words

- **naive** (adjective): unaffected; innocent
e.g. Of course I was a little naive.
- **novel** (adjective): new; unusual
e.g. They would have a hard time adjusting to the novel face-to-face concept.
- **payphone** (noun): a public telephone operated by putting coins into it or by using a special card
e.g. Payphones are available on the street if you need to contact someone while you are out.
- **answering machine** (noun): a device connected to a telephone that answers automatically and records messages
e.g. Answering machines are rare.
- **World Wide Web** (noun): a computer network used for storing and exchanging information; the Internet
e.g. If you consider that his work was published long before the World Wide Web, it is quite astonishing.

Learning Points

Real and Unreal Conditionals

You use the Real Conditional to express events or situations that are likely to happen. You use the Unreal Conditional to talk about hypothetical situations and events, or outcomes that are unlikely to be true.

Unless is used in conditional sentences as a necessary condition without which the outcome of the sentence can't happen.

If ... not is used when the outcome in the *if clause* is unexpected or in questions.

You use *if ... happen to*, or *if ... should happen to* to express an outcome that may be possible, but is not very likely.

You use the Unreal Conditional to talk about a hypothetical or unlikely situation. When you want to be more formal you can use *were* + subject + *to* infinitive.

You use *if* or *whether* with the Unreal Conditional to say that the possible outcomes of a hypothetical condition have been thought about, or to suggest that you are unsure about something. They are usually interchangeable.

Whether can be followed immediately by *or not*.

I'm not sure whether or not he'll come.

When you use *if*, ... *or not* is at the end of the sentence.

I'm not sure if he'll come or not.

Examples:

- *If you remember the time before mobile phones were invented, you know that people had no choice but to interact.*
- *If you should happen to be with a group of people, look around.*
- *If you were to try to converse, what would happen?*
- *You'll be naive if you don't agree.*
- *If you were to take their phones away, they would have a hard time adjusting to the novel face-to-face concept.*
- *I don't know whether I will live long enough to see this.*

Learning Points

Future Perfect: Simple and Continuous

You use the Future Perfect tense to talk about an action in the future before another action in the future. This is the past in the future.

You can think of the Future Perfect tense as being similar to the Present Perfect tense, but instead of your viewpoint being in the present, it is in the future.

Structure:

will have + past participle

Example:

By the time they are adults most children will have carried phones with them for years.

When you use the **Future Perfect Continuous**, you can sometimes think of it as the Past Continuous, but instead of your viewpoint being in the past, it is in the future.

With the Future Perfect Continuous, an action in the future is unfinished by the time another action in the future starts. It is most often used with an expression of time.

Structure:

subject + *will have been* + present participle

Example:

They will have been living in their heads focused on their screens for a long time.

Examples:

- *In the future we will have moved into even more connectivity.*
- *We will have become part of the machine, like it or not.*
- *Another will be having their attention drawn to a news item or Twitter feed.*
- *No one will have been talking to each other.*
